

**concrete
repairs
limited**

Typical applications include:

- Waste Water Containment
- Potable Water Containment
- Chemical Containment
- Bund & Tank Linings
- Tanks, Pipes & Chambers
- Chemical Spillways
- Below Ground Waterproofing
- Culvert Rehabilitation
- Manhole Rehabilitation

Tank Rehabilitation

Before After

CHEMICAL RESISTANT LININGS

Specialist Protection against.....

Water Ingress & Chemical Attack!

- **Protect Your Assets from Water Ingress & Aggressive Chemicals**
APA supply and install a full range of specialist coatings to protect most substrates from chemical attack, improving the structural integrity, prolonging the service life of assets and reducing associated maintenance costs. Coatings with resistance to algae & bacterial growth can reduce the need for regular cleaning. Assets can be put back into commission as soon as 2 hours after treatment!
- **Reduce Environmental Risk, Avoid Chemical Spillage Risk**
Bunds, culverts, pipes, tanks & drains can be treated forming a chemical resistant and gas tight layer to contain chemicals, preventing accidental seepage into surrounding land and waterways. Infiltration of liquids & dangerous gases can be eliminated (such as H₂S). Non-volatile organic coatings are available, improving environmental credentials and reducing the health and safety risk to operatives.
- **High Safety Values & Versatile Application**
Coatings can be applied in confined spaces without the risk of combustion and exposure to hazardous materials. They can be applied to damp surfaces and maintain high bond strength to the substrate.
